

FOR HOMEOWNERS

TRUEFOAM 300

IN ORDER TO RUN AN ENERGY-EFFICIENT HOME, YOU NEED TO START WITH THE RIGHT INSULATION.

Everyone wants a home that stays warm during the winter and cool during the summer - without forking over most of your paycheck on energy costs, of course.

HAVING A PROTECTIVE LAYER OF DURABLE INSULATION HELPS TO MINIMIZE THE R-VALUE LOSS FROM BETWEEN YOUR STUDS – MAKING YOUR HOME A SNUG, COMFORTABLE PLACE TO BE.

TRUEFOAM 300:

- Keeps your home warm and snug even during the coldest days of the year.
- Prevents water leaks and condensation build-up thanks to its exceptional moisture resistance.
- Maximizes your home's R-value. As a 100% recycled product, TrueFoam 300 also increases your LEED rating. It's also made using a green manufacturing process with minimal impact on the environment.
- Saves you money by consistently ranking as the most cost-effective option for applications requiring high R-value and moisture resistance.
- Won't support mould or mildew growth.
- Excels in a variety of situations. It can easily be placed beneath cavity walls, frame walls, masonry wall interiors and exteriors and even below the grade.

Truefoam 300 is an Expanded Polystyrene Insulation (EPS), which means it's made by expanding a polystyrene polymer into a "closed cell" product. It's lightweight, extremely strong and has long-term thermal stability. **Our customers know it's built to last and it's the Energy-Smart Choice.**

LOWER ENERGY COSTS. LONGER COMFORT.

We believe in helping building owners save as much as possible. That's why we designed our products to reduce heating costs and protect the integrity and long-term comfort of both commercial and residential buildings.
